

## PRESS KIT 04.2009

### **Research, Project, Emotion.**

It is the moment to evolve, look ahead, and anticipate the questions. Glem Progetti proposes innovative and surprising solutions for kitchen appliances. Originating from an innate capability that can only come through the professionalism of an old company such as Glem Gas is. Adding a touch of originality and working together with architects and designers, our studio creates ideas and projects with international appeal. An example is given by the new Glem Progetti collection a result of the creativity of BCF designer, Marcello Cutino, who developed the full product range. Marcello was able to use the heart beat of our philosophy which is based on the "emotional design" concept. Focusing on research, we put together new material combinations and adopting the most modern technology available went through a new emotional approach to the product. We were able to transform the aesthetic, the design and the function in such a way to be fascinating and surprising.

Glem Progetti considers the appliance to be not only an efficient tool but also a "sensitive" object which is aligned to contemporary kitchen design, suggesting new emotions, with its own history and background. These are technological advances going beyond the art, remaining loyal to the original style Made in Italy.

### **New domestic rites**

Emotion, surprise, re-interpretation of the tastes and the design through opposite as well as corresponding emotions, to meet two different visions of the present-day kitchen: recalling from our past Origin the inspiration to look and live into the Future.

A double vision of the kitchen room rises, in which the home appliances become persuasive and attractive to be passionately and emotionally "tasted"; places where Origin and Future follow the main principles of the New Emotional Design: the materials are revitalized according to a new aesthetic, the space dilates according to a new functionality and the light plays with the shapes and the volumes involving the deepest feelings....

Two very strong elements, technological the first and emotional the second, characterize the products of Glem Progetti collection: both of them interact with the user to satisfy the need both hedonistic and practical in the same breath. The single burner cook tops "Origine" and "Stellare" breaks the rectangular and square scheme to recall the idea of the centrality of the "fire" in the hospitality rite, ideally originating from the earth in the form of either a ceramic dish or a bright star. The suction function of the hood "Riflesso" is associated to a mirroring surface recalling the hedonism and the desire to reflect the gestures and the images of the cooking spaces to be shared with the others, as well as with yourself. The traditional sink changes into the multifunction basin "Aquapiano" designed to prepare the food and leaving space to the men's gesture and the water flow, both referring to a natural and primitive context.

All these products are distinguished by a marked individuality and have been designed to be combined in the kitchen space thanks to their emotional affinity which looks beyond the design: a new vision where the concept of the "combinable household appliance" is changed, becoming an object with personality, and life style in the kitchen becomes more advanced and refined.

## PRODUCTS

“Starting from the idea of the “fire” as a central element in the hospitality rite, I imagined, in a kitchen space more and more lived-in, two braziers: a warmer one, which for the first time is made of ceramic material, recalls the dish shape; a second one, which is more futurist, takes the architectural shape of a star”.  
(Marcello Cutino\_BCF Desing)

### **Origine single burner hob**

#### The beauty of simplicity in a daily rite

Made from Monolite Ipergres, a warm and natural material never used for this purpose, it reflects the symbolic link between the human being and the earth. “Origine” breaks the rectangular schemes of cooktops, and rediscovers the basis of the object’s foundation, playing a central role in changing the way we view the kitchen. It changes the shapes. An important dimension makes it look more like a brazier rather than a single gas burner. No longer a coordinated appliance, but a piece of furniture with a strong and unique personality, representing your style and your way of life: more advanced and refined.

Plate made in Monolite Ipergres tested to support high temperatures. Available in 3 versions to have burners with different powers and 12 colours: Black, Shiny Black, White, Shiny White, Graphite, Cream, Turtledove and Mustard...

The control area is available either in chromed satinized brass with ebony knob or bronzed brass with walnut knob. The burner is available in the following versions: auxiliary, semi-rapid and triple ring.

### **Origine sink and taps**

#### Simple Refinement

Being natural is always a value, and never a fault. A “soft” material, pleasant at touch, as the Monolite Ipergres is, features also on the other products branded “Origine”. The sink is offered in two sizes and four colours: white, black, cream and streaked sand, and also offered on the tap, which creates a coordinated effect. The auxiliary wooden chopping boards amplify the overall natural sensation.

### **Stellare single burner hob**

#### The flame as an architectural shape of a star

If the word “brazier” can refer to ancient times, Glem Progetti has created a product which borrows structural codes from ancient architecture and the aesthetic of a star. “Stellare” is the new single burner gas cooktop, realized with traditional materials and reinvented through an absolute synthesis between the shape and the technology. A visual balance between the plate and the sinuous dynamic shape of the cast iron fingers with the simplicity of stainless steel control area. “Stellare” is born to create a new scenario in the kitchen.

Cast iron pan supports with stainless steel parts removable for an easy cleaning.

Black enamelled cast iron plate, removable and washable in the dishwasher.

Stainless steel control area with the black satinized aluminium knob.

The burner is available as auxiliary, semi-rapid and triple ring.

## PRODUCTS

### **Induction Stellare cooktop**

#### Complementary Features

Improving one's own capacities and professional abilities is a sign of character. Induction "Stellare" consists of two complementary features: the gas flame to cook and the induction for better functions like the speed to reach temperature and cooking time control which make the kitchen both easier to use and more refined.

### **Riflesso Hood**

#### The space, reflected, amplifies the image of taste and feeling

There is nothing more creative than re-inventing the style and the trend, even when talking about a suction hood. "Riflesso": why this name? To underline the double usage of this new and elegant object, featured with a mirror that modifies the perception, it is at the same time an elegant piece of furniture.

The mirroring surface recalls the hedonism and the desire to reflect your gestures, your thoughts and the images of the cooking spaces, to be shared with the others, as well as with yourself.

How could you have fun otherwise?

A thin thickness of only 11cm allows to hide "Riflesso" in the cooking area.

Close to be camouflaged, thanks to a motor which can be built-in or remote, it reveals itself through the reflected images and the light coming from the profiles drawing its slim shape. The environment becomes bigger and the atmosphere spreads out. The cooking area becomes the image of every sensation you live and enjoy.

### **Aquapiano**

#### Water as an element where to discover ancient rituals

We designed a product which goes beyond the functions of a traditional sink because it represents the interaction between a person's gestures and the water flow. It is "Aquapiano", a sinktop of 116 cm width and the basin where the water flows is only 6 cm depth. It can be built-in with minimal reduction in the space of the cupboards below and it has been designed as a specific product for food preparation with a range of accessories. The circle of functional perfection is reached when "Aquapiano" is used as a sink for traditional style washing.

Designed with a chopping board in tempered crystal, a small sink, a top with drain holes, plus a pasta colander; "Aquapiano" is equipped with an extractable tap and a side waterfall which allows to wash the food and wash away scraps into to a sink with a depth up to 20cm, to which a waste disposal unit can be connected

## PRODUCTS

### **Ambiente Oven**

#### Catch the light to warm up your life

It is exactly with the senses, the eyes and the colour, what the new oven "Ambiente" plays with: the coloured light indicates the different cooking stages, and plays a clear emotional role, giving to the cooking area a special atmosphere which sets free your mind, thoughts and dreams.

Varying its intensity the light shows the different functions of the oven: when the temperature is low, while defrosting for example, the light is blue, whereas it gradually turns red as the temperature increases.

The outlines are satinized black or stainless steel, the controls are minimal, the handle is flush with the oven; the door is has three sheets of glass to create perfect temperature inside and cooler temperature outside, the cavity is copper enamelled and equipped with telescopic guides. A digital programmer is easy to use.

"Ambiente" goes beyond the beauty, it represents a sophisticated technology rewarding you with its function.

### **122**

#### Being lost in the infinite to discover the daily emotions

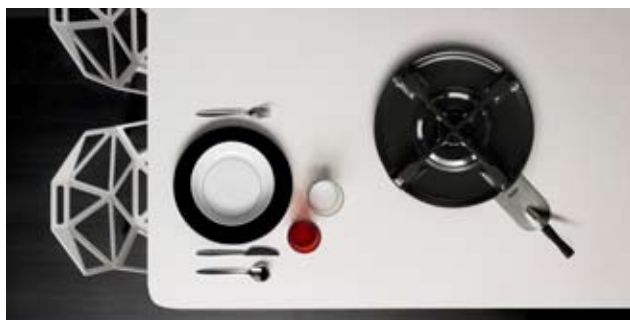

What do you obtain by joining the simplicity of the lines and the solidity of a structure to an advanced technology? We can reply with a number: 122

A cooker containing a big potentiality which talks about creativity, functionality and professionalism.

"122" has unusual dimensions with details and accessories symbolizing a strong and kind character; it furnishes and satisfies different styles, especially in the kitchen.

The extractor hood matches perfectly the cooker, the Teppanjaki plate increases the services of a cooktop with six burners and the telescopic guides inside the multifunction oven allow an easy extraction of the chromed shelves: these are some of the details which will grant you the best results with the minimum effort.
